

# Supplementary Figure 1

List of parameters resulting from the sensitivity analysis with  $\delta$  ranging from 0.25 to 1.5. For each parameter  $P$  with baseline value  $p$ , the output variance was calculated for samples for which  $P$ 's value was more than  $\delta$  standard deviations from  $p$  and those that were closer. Darker colors represent larger ratios, and lighter colors represent smaller ratios.
